Summary

Results-driven Software Engineer with nearly 3 years of experience specializing in full-stack development, microservices architecture, and cloud-native technologies. Proven track record in implementing advanced search and data extraction solutions, including Tesseract OCR and Elasticsearch with Arabic-specific stemming, demonstrating a strong capability for handling complex data-centric use cases. Expert in building scalable, event-driven architectures using Kafka and managing containerized environments with Docker and Kubernetes. Proficient in modern DevOps practices, CI/CD pipelines, and Agile methodologies, with a focus on delivering high-quality, production-ready applications that bridge the gap between sophisticated backend processing and seamless user experiences.

Work Experience

- Confidential Government Agency** Riyadh, Saudi Arabia
Software Engineer *Dec 2024 - Now*
 - Designed and engineered a high-impact Document Upload feature utilizing Node.js, .NET, and Next.js.
 - Integrated Tesseract OCR for automated text extraction and implemented Elasticsearch with an Arabic analyzer to provide high-quality full-text search capabilities.
 - Architected data consistency across MongoDB, MinIO, and Elasticsearch using the Saga pattern.
 - Developed an automated retry mechanism via Cronjobs to ensure robust OCR processing reliability.
 - Built a scalable audit logging system to track all system changes with detailed before/after state comparisons.
 - Leveraged Kafka-based event-driven architecture to facilitate non-blocking communication and optimize system performance.
 - Managed deployment of containerized applications using Docker and Nginx reverse proxy configurations.
- Wakeb** Riyadh, Saudi Arabia
Software Engineer *Mar 2023 - Dec 2024*
 - Developed and maintained robust RESTful APIs for command and control web applications using Vue.js and Spring Boot.
 - Implemented real-time data synchronization via UDP, API, and MQTT integrations.
 - Conducted rigorous field testing to ensure system reliability in mission-critical environments.
 - Enhanced engineering standards by establishing code review processes and Git branching strategies.
 - Mentored internship developers on software best practices and the adoption of emerging technologies.
 - Actively contributed to Agile/Scrum ceremonies, including sprint planning and retrospectives.

Projects

- **CarShowroom Management System**

Full-stack Developer

Now

- Developed a full-stack application featuring complete CRUD operations, data validation, and pagination.
- Implemented HATEOAS for enhanced API discoverability.
- Engineered a complete CI/CD pipeline using Jenkins, Docker, and Docker Compose for automated deployment across Dev, Staging, and Production environments.

- **Riyadh Real Estate Bot**

Developer

Now

- Built an autonomous multi-platform social media bot for real-time real estate deal sharing.
- Utilized Python, Tweepy, and the Telegram Bot API to automate data dissemination.
- Implemented threading and PM2 for high availability and performance.

Education

- **Qassim University, Saudi Arabia**

Riyadh, Saudi Arabia

Bachelor of Information Technology (Second Class Honors)

2018 - 2023

Courses & Certifications

- **Certified Kubernetes Application Developer (CKAD)**

Cloud Native Computing Foundation

Now

- **Angular - The Complete Guide (2024 Edition)**

Udemy

Now

- **Java Web Developer Nanodegree**

Udacity

Now

Technical Skills

JavaScript, Java, C#, Python, React, Vue.js, Angular, Express, Spring Boot, ASP.NET Core, MongoDB, PostgreSQL, Redis, Elasticsearch, Docker, Kubernetes, Jenkins, Kafka, MinIO, Nginx, Git, REST APIs, gRPC, Microservices, CI/CD, Agile/Scrum, Tesseract OCR, Saga Pattern, Event-Driven Architecture, MQTT, UDP
